

## **MEN AT WORK**

With a new investment of around 10 million euro, **Almeco** leading company in the metal surface treatment, extends and completes its range of aluminium products in the architectural field. A benchmark manufacturer in the rolled aluminum anodized for applications sector of **Building & Construction**.

The industrial experience gained in over 50 years of activity has allowed the Almeco Group to design and implement a new surface electrochemical treatment line capable of producing of aluminum coils with technical features of long life and high resistance to atmospheric agents, up to **2000 mm width**, maximum **thickness of 3 mm** and a **weight of 12 tons** coil.

The installation of the new **Linea 2000** is being implemented at its headquarters in San Giuliano Milanese (Milan, Italy). The agenda includes the entry into operation of the plant **in January 2018**.

The technologies used for the development and control of the production process are the most modern ever used for a line of treatment of these characteristics.

The **Linea 2000** will also be equipped with an eco-friendly plant for the total recycling of process waters called "**zero waste**".

The new business unit will cover the full range of possible surface finishes that can be used for architectural outdoor industry, including an assortment of colors, made of electro-coloring, which will cover a wide range of shades to complete the offer for the **Building & Construction** market represented by Almeco, to date, with the offer of laminates for interiors design branded "**bandoxaldecor**".

**Almeco Group**, the one and only specialized manufacturer able to meet all the needs of architects and builders for the industry of facade and walls for buildings, furnishings and interiors, lighting and solar energy.
